Executive Summary

The Citizen Grievance Tracking System (CTS) is a purpose-built digital platform giving every citizen of the constituency a simple, transparent way to raise a grievance and follow it through to resolution — without repeated office visits, lost paperwork, or uncertainty about where a complaint stands.

This document introduces CTS for the office of the Hon'ble MLA, Mandapeta Assembly Constituency, as the pilot for what can grow into a state-wide rollout across all 175 Andhra Pradesh MLA constituencies and 25 Lok Sabha MP offices — at zero cost to government at every stage.

175 AP MLA constituencies	25 Lok Sabha MP offices	1 day To go live per office	₹0 Cost to government, ever
-------------------------------------	-----------------------------------	---------------------------------------	---------------------------------------

The Challenge Today

Grievance handling through conventional channels — in-person visits, phone calls, and paper registers — creates real, everyday friction for both citizens and staff:

- Citizens often cannot tell whether their complaint was received, who is handling it, or when to expect a resolution.
- Paper-based records are hard to search, easy to misplace, and offer no way to spot recurring problems across villages or mandals.
- Staff have no structured way to prioritise, assign, or track grievances at scale as complaint volume grows.
- There is no consolidated, constituency-wide view of grievance patterns to guide where attention and resources are most needed.

The CTS Platform — Key Features

CTS replaces this with a structured digital workflow: a citizen submits a grievance once, it is automatically routed to the right staff member, tracked through resolution, and the citizen is kept informed at every step — in Telugu or English, on any basic smartphone, with no app installation required.

Feature	What it does
Citizen Portal	Phone-based sign-in (OTP via WhatsApp, no password) — citizens submit a grievance with details, photos, and location, in Telugu or English.
Real-Time Status Tracking	Citizens can check the live status of their complaint at any time using their tracking token.
WhatsApp Notifications	Automatic WhatsApp updates at every stage — received, under review, escalated, and resolved.
Staff Dashboard	Office staff see incoming grievances organised and ready to triage, assign, and act on — not buried in a paper register.
Verified Staff Access	New staff access requests are reviewed and approved before anyone can view or manage citizen data.
Reports & Analytics	A consolidated dashboard of grievance volume, resolution timelines, and category breakdowns — by village and mandal.
Citizen Feedback	Automatic feedback collection after every resolved complaint — star rating plus free-text comments.
Printable Acknowledgement	A formal, printable copy of every complaint — with a reference number — for

	the citizen's own record.
--	---------------------------

How Each MLA Gets Their Own Portal

Every MLA and MP receives a completely isolated grievance portal, live within one day, at no cost — ever.

- 1. MLA office applies:** A simple onboarding request starts the process.
- 2. Identity verified:** MPower confirms the office and constituency details.
- 3. Portal live in 1 day:** The onboarding wizard creates the isolated database partition, seeds local geography (villages, mandals), and generates the unique citizen portal link.
- 4. Staff accounts added:** The office adds its own staff with role-based access — no coding or MPower involvement required.
- 5. Citizen link shared:** The unique portal URL is shared with citizens via WhatsApp, notice boards, or any existing channel.
- 6. Live — completely free:** The portal is fully operational, with zero setup or ongoing cost to the office or government.

Access & Permissions

What Each MLA Gets

- A unique citizen portal URL for their constituency alone.
- A private staff dashboard — no other MLA's office can access it.
- Unlimited staff accounts with role-based access.
- Reports scoped to their own constituency only.
- The built-in citizen feedback system.
- Complete data isolation, enforced at the database level.

What the MLA Controls

- Add or remove staff at any time.
- Assign staff, senior, or admin roles.
- View all complaints with full history.
- Print or export reports at any time.
- View citizen feedback ratings and comments.
- Set complaint priority and deadlines.

Complete Access Matrix

Role	Own Constituency	Other MLA Data	State Level	Add Staff	Feedback
MLA / MP Admin	Full	No	No	Yes	All
Senior Staff	Full	No	No	No	All
Complaint Staff	Own queue only	No	No	No	Own only
State Govt / CM	Read-only	Read, all	Full dashboard	No	State level

Every person only sees complaints for their own constituency — except Grievance Admin and state-level roles, who can see the whole state. This is enforced automatically by the system, not chosen by the user.

Official AP Welfare Schemes — Pre-Loaded

The citizen portal comes pre-loaded with the current, officially renamed Andhra Pradesh government welfare scheme categories — kept up to date so citizens select the correct, currently active scheme name when filing a grievance.

Education

- Talliki Vandanam Scheme — annual support to mothers, ₹15,000
- Sarvepalli Radhakrishnan Vidya Mitra — student kits
- Dokka Seethamma Madhyahana Badi Bhojanam — mid-day school meals
- Mana Badi — Mana Bhavishyathu — school infrastructure
- Balika Raksha — hygiene support for school girls

Higher Education

- Post Matric Scholarships — tuition fee reimbursement
- Post Matric Scholarships — hostel and mess (maintenance) support
- Ambedkar Overseas Vidya Nidhi (AOVN) — overseas education support
- Abdul Kalam Prathiba Puraskaram — award for exam toppers
- NTR Vidyonnathi — competitive exam coaching support
- Incentives for Civil Services Examination — support for UPSC candidates

Agriculture & Nutrition

- Annadata Sukhibhava — farmer investment support
- Bala Sanjeevani — school and anganwadi nutrition programme
- Anna Amrutha Hastam — nutrition support for pregnant and lactating mothers

Welfare, Pension & Housing

- NTR Bharosa Pension Scheme — elderly, disabled, and widow pensions
- Chandranna Pelli Kanuka — marriage assistance for brides from poor families
- NTR Housing Scheme — housing for the economically weaker sections

Documents Citizens Need

- **All grievances:** Aadhaar card, ration card (rice card), income certificate (MeeSeva / Secretariat)
- **Land and property disputes:** Pattadar passbook copy, registered sale deed, Adangal/Pahani, 1B records, survey numbers, geo-tagged photographs
- **Scheme-related complaints:** Aadhaar card, ration card, relevant scheme enrolment documents

Automatic Citizen Feedback System

Feedback is collected automatically after every complaint is marked resolved — no extra effort required from citizens or staff:

1. **Automatic WhatsApp message:** Sent to the citizen the moment their complaint is marked resolved.
2. **1-to-5 star rating:** Covering speed of service, staff attitude, and quality of resolution.

3. **Comments in Telugu or English:** Citizens can add free-text feedback in their own words.
4. **Reports in the MLA dashboard:** Monthly feedback trends, with low-rated categories highlighted.
5. **State-level summary for the CM's office:** Feedback analytics rolled up across all constituencies.

Cost to Government: ₹0

The entire platform — setup, staff training, all 175 portals, the CM dashboard, and the feedback system — is provided at zero cost to the Andhra Pradesh government, at every phase of rollout:

- Setup: ₹0
- Staff training: ₹0
- 175 portals: ₹0
- CM office dashboard: ₹0
- Citizen feedback system: ₹0
- Ongoing maintenance: ₹0
- Future upgrades: ₹0

State-Wide Rollout Plan

Mandapeta constituency is proposed as the pilot — the first of a phased, state-wide rollout reaching all 175 AP MLA constituencies and 25 Lok Sabha MP offices within six months.

Phase	Scope	Timeline
Phase 1	Mandapeta Pilot — 1 constituency	Month 1 — live with all updated scheme categories, feedback system active, staff trained
Phase 2	East Godavari district — 16 constituencies	Months 2–3 — all East Godavari MLAs and MPs, district-level reports, CM office read access
Phase 3	Coastal AP — 60 constituencies	Months 3–4 — full coastal coverage, MP portals added, Minister department dashboards, state feedback analytics
Phase 4	All 175 constituencies + 25 MPs	Months 5–6 — full state rollout, CM full analytics, Secretariat integration, complete feedback system

Benefits for the Constituency

- Transparency: citizens can see exactly where their grievance stands, at any time.
- Accountability: every grievance is logged, timestamped, and traceable from submission to resolution.
- Efficiency: staff triage and resolve grievances through an organised workflow instead of a paper backlog.
- Insight: constituency-wide reporting highlights which villages, mandals, or issue categories need the most attention.
- Convenience: citizens can raise and track grievances from home, reducing repeated office visits.
- Trust: a visible, well-run grievance system strengthens public confidence in constituency governance.

Next Steps

We would welcome the opportunity to walk the office of the Hon’ble MLA through a live demonstration of the platform — configured for Mandapeta constituency — and to discuss onboarding as the state’s pilot constituency.

For scheduling a demonstration or any further information, please reach out to Team MPower.

APPENDIX A

Technical Supplement

How the platform’s multi-tenant architecture keeps 175 MLA offices sharing one system with zero data mixing between them.

Technology Stack

Component	Details
Frontend	React 18 + Vite, deployed on Netlify CDN (200+ global edge nodes)
Auth	Supabase Auth — JWT (RS256) tokens, OTP via WhatsApp, email confirmation
Database	PostgreSQL on Supabase — Row Level Security (RLS) enforced per app_id at the database engine level, not application-layer trust
Edge Functions	WhatsApp OTP, ABHA verification, translation, complaint print, audit stamp, report generation
WhatsApp	Twilio WhatsApp Business API — OTP delivery, status updates, citizen notifications in Telugu
Security	TLS 1.3 in transit · AES-256 at rest · SHA-256 audit trail · India data residency (Mumbai, AWS ap-south-1)

Data Isolation — How Row-Level Security Works

- Every table has an app_id column identifying which MLA the row belongs to.
- On login, Supabase sets the session’s current app_id.
- Every read and write is filtered by the database itself using this app_id — not by application code.
- Even if application code had a bug, the database engine still blocks cross-tenant access.
- One MLA’s query is physically incapable of returning another MLA’s rows — this is enforced at the engine level, not the application level.

Citizen Filing Flow

- 1. Open portal:** The MLA shares a unique WhatsApp link. Citizens click it — opens on any mobile browser, no app download needed.
- 2. OTP verification:** Citizen enters their mobile number; OTP is sent via WhatsApp within seconds. No password required.
- 3. Select category:** Citizen chooses a scheme category — pension, housing, roads, water, electricity, and more.
- 4. Enter details:** Village, mandal, and district are auto-detected from the constituency. The complaint can be typed in Telugu or English, with an optional photo.
- 5. Submit:** The complaint is registered with a unique tracking token; a WhatsApp confirmation is sent instantly.
- 6. Track status:** The citizen can re-open the portal at any time, enter their token, and see real-time status.

Complaint Lifecycle

Status	Who Acts	What Happens	Citizen Notified
Pending	Auto	Complaint filed, waiting for staff to pick up	Confirmation
Under Review	Staff	Staff assigns to self, adds notes, contacts relevant department	Status update

Escalated	Senior staff	Flagged for MLA’s direct attention as a priority complaint	Escalation notice
Resolved	Staff	Resolution details added; citizen can print resolution certificate	Resolution notice
Closed	Admin	Confirmed closed; appears in monthly reports	Closure notice

Privacy & Data Protection

What Is Stored

- Mobile number (hashed, not stored in plain text)
- Complaint text, category, village, mandal, and district
- Status history with timestamps
- Internal staff notes (never shown to the citizen)
- A full audit trail — who changed what, and when

What Is NOT Stored

- Aadhaar number
- Bank account details
- Caste, religion, or income
- GPS location data
- Any biometric data

Technical Q&A

The most common technical questions raised by MLA offices and IT departments.

Q1. If one MLA's portal is compromised, can the attacker see other MLAs' data?

No. Data isolation is enforced at the PostgreSQL database engine level using Row Level Security (RLS). Even with full application access to one MLA's account, the database physically blocks any query attempting to read another MLA's rows. Application code is never trusted for isolation — the database itself enforces it.

Q2. What happens if the internet is down in the MLA office?

Citizens can still file complaints on mobile data. The staff dashboard requires internet, but the app is cached via Netlify CDN, so it loads quickly even on slow connections. Complaint data syncs automatically once the connection is restored.

Q3. Can a citizen from one constituency accidentally file into another MLA's portal?

No. Each portal URL is unique to its MLA, with the tenant identifier embedded in the link itself. There is no path by which a citizen using the shared URL system can reach the wrong MLA's portal.

Q4. How is the WhatsApp OTP system protected against fraud?

The OTP is 6 digits, valid for 5 minutes, and single-use. It is rate-limited to 3 attempts per mobile number per hour. OTPs are never stored in plain text — only a bcrypt hash is kept. The WhatsApp Business API requires verified business registration.

Q5. Where is the data physically stored — is it within India?

Yes. The database is hosted on AWS ap-south-1 (Mumbai), and the frontend is served from Indian edge nodes for Indian users. No data leaves Indian jurisdiction, in line with the IT Act 2000 and the framework of the Digital Personal Data Protection Act.

Q6. How long does it take to add a new MLA to the system?

One business day. The onboarding wizard creates the app record, seeds geographic data (villages, mandals, constituencies), sets up RLS policies, generates the unique citizen portal URL, and sends credentials to the office — no coding required per MLA.

Q7. Can the CM's office see individual citizens' personal details?

No. The planned CM office dashboard shows only aggregated statistics — total complaints per constituency, resolution rates, category breakdowns, pending counts. Individual citizen details are never exposed at state level; this is enforced by a separate read-only view that strips personal information before returning data.

Q8. What happens to government data if MPower were to stop operating?

The government can export the entire database as a standard SQL dump at any time. The schema and data are portable to any PostgreSQL-compatible hosting. Monthly encrypted backups to a government-designated storage location can also be provided on request.

Q9. Does the system work on basic Android phones with 2G/3G connections?

Yes. The citizen portal is a lightweight app — under 180KB gzipped on initial load — tested on Android 8+ devices over 2G connections. WhatsApp OTP works on any network; the staff dashboard benefits from 3G or better for real-time updates.

Q10. Is the source code auditable by government?

Yes. Full source code access can be provided to an authorised government IT audit team under an NDA. The codebase is standard React and Node.js, with no obfuscation. An independent security audit report can also be provided on request.

Q11. How many concurrent users can the system handle?

The CDN handles unlimited concurrent frontend users globally. The database tier used comfortably supports all 175 MLA offices operating simultaneously, with a clear upgrade path available if usage grows beyond that — covered by MPower, not government.

Q12. What is the planned Minister role, and when will it be available?

A Minister view is designed but not yet built. It will show complaints filtered to a Minister's assigned department — read-only, with no personal citizen information exposed. Planned for roughly two weeks after the Mandapeta pilot confirms stable operation.

APPENDIX B

Administrator & Staff Guide

Every screen explained in plain language — for constituency office staff

MPower

Constituency Grievance Tracking System (CTS)

Admin & Staff Guide

Every screen explained in plain language — how you get there, what each part is for, and when to use it

August 2026

Foreword

MPower CTS exists because filing a grievance with an elected representative should not require knowing the right person, travelling to an office, or hoping a paper complaint doesn't quietly get lost. It should take a phone, a few minutes, and nothing else.

This guide was written by the person who actually built the system — not a documentation team working from a spec, one developer working directly against the real, running application. Every screen described here was checked against the actual code and the actual screens rather than assumed, because a guide that doesn't match what you really see on your own screen is worse than no guide at all. Where something is a known limitation rather than a finished feature, this guide says so plainly instead of glossing over it.

MPower CTS is one part of a larger effort — MPower also serves schools and hospitals — built with the belief that essential software for Indian institutions and citizens should be genuinely well-made, not an afterthought. This guide, like the system itself, will keep improving as real offices and real citizens start using it.

If anything in these pages is unclear, or the app itself falls short of what's promised here, I want to hear about it directly.

Contents

1. About This Guide

This guide explains, one screen at a time, how constituency office staff use MPower CTS. Every section follows the same simple pattern:

- A path of boxes showing exactly how you reach that screen
- A box-by-box breakdown of everything on the screen, explained in plain words
- A short note on what to do if that screen ever needs to change

Nothing here is guessed — every field name, button, and rule comes from checking the real system.

1.1 Who this guide is for

Role	What they can do	Screens they use
Grievance Admin	The most senior role in an office. Can act on any complaint, approve new offices, and see everything.	Login, Queue, Reports, Verify, Print, Feedback
Representative	Works complaints for their own constituency only. This is the everyday, hands-on role.	Login, Queue, Print
Authority	Only handles complaints that have already been escalated up to them for a decision.	Login, Queue, Print
Developer / Support	MPower’s own team, for support and testing. Same access as Grievance Admin.	All screens

NOTE: Every person only sees the complaints for their own constituency — except Grievance Admin and Developer/Support, who can see the whole state. You do not choose this; the system decides it automatically based on who is logged in.

2. Signing In

This is the very first screen every staff member sees.

2.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

2.2 What this screen looks like

This is the real screen, redrawn exactly as it appears — same layout, same wording, same order:

SAMPLE REDRAWING OF THE REAL LOGIN SCREEN — borders only, no colour

PASSWORD

Forgot password?

.....

Sign in →

New to MPower? [Start your free trial →](#)

HONEST NOTE: The exact wording on this screen (such as "Forgot password?" and "Start your free trial") is shown here exactly as it appears on screen. If pressing either of those ever behaves unexpectedly, that is worth reporting separately — this guide describes what is shown, not a guarantee of what every link does.

IF THIS NEEDS TO CHANGE: If you ever need extra fields on this screen, or a different way to sign in (for example, signing in with just a phone number instead of an email), that is a request for whoever maintains the system to build. As of this guide, only email + password sign-in exists — there is currently no way for a staff member approved without an email to log in at all.

3. Getting Access — Registering a New Office

Before anyone can sign in (Section 2), their office must first be registered and approved. This only happens once per office, not once per person.

3.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

3.2 What this screen looks like

Shown here filled in with made-up sample details, so the real layout and field order are clear:

SAMPLE — Registration form, with made-up entries

Submit Registration Request

What each field means

Field	Required?	What it means
I am an... (MLA / MP / MLC)	Yes	Pick which kind of office this is. This choice controls what appears in the Constituency list next, so pick it first.
Office / Organisation Name	Yes	For example: "Office of MLA Mandapeta."
Constituency	Yes	Chosen from a real list, not typed freely — this stops a spelling mistake or a made-up constituency from ever being submitted.
Contact Person Name	Yes	The name of the MLA/MP, or whoever is in

Field	Required?	What it means
		charge of the office day-to-day.
WhatsApp Mobile Number	Yes	Used to send the confirmation message once MPower approves the office.
Email	No	Optional, but worth adding since it becomes the login email later.

After you submit, you will see a confirmation with a reference number. MPower then checks the details and activates the office, usually within one working day.

IF THIS NEEDS TO CHANGE: Any change to which fields are collected here — adding or removing one — is a request to whoever maintains the system, since this form feeds directly into how the office gets approved (Section 4).

4. Screen: Verify — Approving a New Office

Once someone submits the registration form in Section 3, an admin must review and approve it here before that office can sign in. Only Grievance Admin, Developer, and Support can see this screen.

4.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

4.2 What this screen looks like

Shown here with one made-up sample request, so you can see the real shape of the screen, not just a description of it:

VERIFICATION METHOD

Select how this was verified...

Approve

Reject

■ Queue

▲ Reports

● Verify

◆ Print

The three tabs sort requests by decision status — "Pending" is where new, undecided requests wait, and is the one you will open most often. Each card is created automatically the moment someone fills in the Section 3 form. Before you can approve anyone, you must pick a Verification method — the system blocks approval without one, on purpose. Pressing Approve creates the office's real, working login — the exact login they will use on the Section 2 screen. Reject only records the decision; it does not create any login.

IF THIS NEEDS TO CHANGE: The list of verification methods (winners' list, gazette notice, and so on) is fixed in the system right now. Adding a new one is a request to whoever maintains the system.

5. Getting Around — The Bottom Menu

Once signed in, every screen shares one menu bar fixed to the bottom of the screen. This is how you move between the main working areas.

Button	Takes you to	Who sees it
Queue	The everyday working list of complaints (Section 6)	Everyone signed in
Reports	Charts and summaries of all complaints (Section 7)	Everyone signed in
Verify	New office approvals (Section 4)	Everyone signed in
Print	Letters and printed reports (Section 8)	Everyone, including citizens

NOTE: The Print button is a little different from the rest: from any other screen, it takes you to the Print screen. But if you are already ON the Print screen and press it again, it skips navigating anywhere and just opens your printer dialog straight away.

ABOUT THE SYMBOLS: The real menu bar uses small picture icons rather than the plain shapes shown here — the shapes are used in this guide only so every symbol displays correctly no matter which program opens this document.

6. Screen: Queue — Your Everyday Working List

This is where staff spend most of their time — the list of complaints that need attention.

6.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

This is also the very first screen you land on right after signing in.

6.2 What this screen looks like

Shown with two made-up sample complaints, so the layout, wording, and buttons are real — not just described:

The title bar at the top is generated automatically — it always shows your role and name, plus a live count. The two tabs split complaints by whether they still need action or are already finished. The search box and category/priority filters narrow a long list — only useful once the list is long; for a short list, feel free to just scroll. Every complaint card is created automatically the moment a citizen submits it — you never make one yourself. The action buttons you see on each card change depending on your role and that complaint’s current stage, shown in the table below.

What each role is allowed to press

Role	What they can do to a pending complaint
Representative	Acknowledge it, then Start work, then either Mark resolved, Escalate (send it further up), or Decline with a reason.
Authority	Only on complaints already escalated to them: Approve & sanction, Send it back for

Role	What they can do to a pending complaint
	more work, or Decline with a reason.
Grievance Admin	Acknowledge, Mark resolved, or Decline with a reason — directly, on any complaint, without the extra steps above.

NOTE: Whenever you press Decline, you must type a reason first — the system will not let you decline without one, because the citizen will read that reason.

How a complaint's status actually changes

This is the real mechanism behind those buttons — not just what each one is called, but what pressing it actually does.

From Acknowledged or In Progress, a representative can also press Escalate instead of continuing straight to Resolved:

The Authority role can also press "Send back," which returns an escalated complaint to In Progress instead of approving it.

Every single one of these button presses does the same two things behind the scenes:

- A new entry is written to that complaint's history log — recording the new stage, who did it, when, and any note left with it.
- The complaint's own current-stage field is updated to match.

The citizen's tracking screen (their Section 7) picks this up and shows it immediately — there is no separate notification step, no delay. The moment you press Mark resolved, that is what the citizen sees.

IMPORTANT: The word "Escalated" itself is never shown to the citizen. Citizens query a separate, simplified view of their own complaints that deliberately displays Escalated as "In Progress" instead — the internal Sanctioned/Send back workflow above is for staff and Authority only. A citizen may see "In Progress" for longer than expected while a complaint is genuinely being escalated and reviewed above your office — that is expected, not a bug.

NOTE: Pressing Decline works the same way — it also writes a history entry and updates the stage — but the system requires a reason to be typed first, since that reason is exactly what the citizen reads.

GOOD TO KNOW: Adding a Remark or setting an Assigned Department (below) does NOT move the complaint through this flow at all — it is a way to leave an internal note without forcing a stage change, useful when work is happening but nothing is ready to report to the citizen yet.

GOOD TO KNOW: These same action buttons work identically whether you are on a phone, a desktop browser, or acting on a complaint from within Reports (Section 7) — all three reach the same underlying screen, so nothing is mobile-only.

Opening a complaint's full detail

Tapping any complaint card opens more detail, including the citizen's evidence and two extra things you can set:

Field	What it is for
Evidence photos	Any photos or video the citizen attached when filing appear here. You can also

Field	What it is for
	add your own evidence photos here — but only photos, not video, and only one at a time (5MB limit each). Video is only ever accepted from the citizen at the moment they first file.
Assigned Department	A free-text note saying which department is handling it — shown later to the District Collector's office on batch reports.
Remark	An optional internal note. Adding one does not change the complaint's stage — so you can leave a note without being forced to also change its status.

IF THIS NEEDS TO CHANGE: If a new action or a new filter is ever needed on this screen, that is a request to whoever maintains the system — the list of actions is tied directly to each role's permissions, so it cannot simply be changed by a staff member.

7. Screen: Reports — Seeing the Bigger Picture

While Queue shows individual complaints, Reports shows patterns and totals across all of them.

7.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

7.2 What this screen looks like

Shown with made-up sample totals, so the real shape and wording are clear:

The six summary cards at the top — Total, Resolved, Pending, Escalated, Declined, and Sanctioned — give a fast, at-a-glance total. Declined and Sanctioned both count toward Total but are excluded from Pending, since neither is still "open" work — without these two cards, Total would never quite add up to Resolved + Pending + Escalated, with nothing explaining the gap. The four tabs let you regroup the same complaints by Category, Village, Mandal, or Constituency — switching between them never changes the data, only how it is organised. Each row can be tapped open to reveal the real complaints inside it, sorted so the longest-waiting one appears first.

GOOD TO KNOW: Tapping any individual complaint — whether from an opened row, or from a Patterns group below — opens the exact same detail view used on Queue. You can Acknowledge, Mark resolved, or take any other action for your role directly from Reports; you do not need to go find that complaint again on Queue first.

Patterns & Duplicates — what it actually checks for

This panel is collapsed by default — a count next to its heading tells you if anything was found, so you only open it when it matters. It checks for three distinct things automatically:

What it flags	The real rule behind it
Hotspots	3 or more complaints, in the same village, about the same category. A real signal that several households are hitting the same underlying problem — stronger case escalated together than as separate low-priority tickets.
Family patterns	2 or more complaints where the citizens share the same father’s/husband’s name and village — likely the same household filing under different names or for different issues.
Exact duplicates	The same citizen filing the same category twice within 24 hours — almost always an accidental double-submit, flagged so it is not mistaken for two separate problems.

Every complaint shown in any of these three groups is itself tappable, opening the same actionable detail view mentioned above.

Getting a copy out of the system

Button	What it makes
Export as CSV	A spreadsheet file with one row per group (Name, Total, Resolved, Pending, Urgent, Escalated), using whatever grouping and filters are currently selected on screen.

HONEST NOTE: There is currently no PDF or print-formatted export on this screen — only the plain CSV button above. If a print-ready version of Reports is ever needed, that is a request to whoever maintains the system.

IF THIS NEEDS TO CHANGE: Adding a fifth way to group complaints (beyond Village/Mandal/Category/Constituency), or a new pattern-detection rule, is a request to whoever maintains the system, since each is built from its own underlying data/logic.

8. Screen: Print — Letters and Reports

Every printable document in CTS is produced here — from a single citizen’s formal letter to a full batch report for the District Collector.

8.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

You can also arrive here directly from a "Print this view" button on the Queue screen, which brings your current search/filter choices along with it.

8.2 The three kinds of document

Shown here as the actual mode-selector screen you choose from:

SAMPLE — Print Centre, mode selector

Complaint Print Centre

Print / Export

Representation Letter

Citizen → MLA/MP · one complaint, bilingual formal letter

Single complaint print

One complaint's full detail, staff only

Batch List for Minister

Many complaints at once, for the District Collector's office

Print

Representation Letter turns one complaint into a formal, bilingual letter from the citizen to their MLA/MP — it is the only one of the three a citizen can produce themselves. Single complaint print is one complaint’s full detail, staff only. Batch List for Minister lays out many complaints at once, sideways (landscape), staff only.

Whichever one you choose, pressing "Print now" opens your browser’s own print window — from there you can print on paper, or choose "Save as PDF" to keep a digital copy instead.

8.3 Sample output — what a Representation Letter actually looks like

Instead of only describing it, here is a real example — built with made-up sample details so you can see the exact layout, wording, and bilingual formatting a citizen and MLA/MP office would actually receive.

GRIEVANCE REPRESENTATION / పి క హాటా వీ ఓ ఖావన వ రి ఓ

Government of Andhra Pradesh · Submitted through MPower CTS · Case No: GR/2026/000042

To,

The Honourable Member of Legislative Assembly,

Sri/Smt. A. Venkata Rao,

Legislative Assembly Constituency — Sample Constituency

Sub: Representation regarding **Drainage & Sanitation** / ముఠాం — Drainage overflow near main road

Ref: Grievance Case No. GR/2026/000042 dated 01/08/2026

Respected Sir/Madam,

I, **Ramesh Naidu**, resident of Sample Village, Sample Mandal, humbly submit this representation to bring to your kind attention the following grievance pertaining to our area.

Nature of Grievance / పి క హాటా వీ న ఓ లా:

The drainage canal near the main road has been overflowing for the past two weeks, causing waterlogging and health concerns for nearby residents. Stagnant water has started collecting close to three houses, and mosquito breeding has increased noticeably.

Category: Drainage & Sanitation · Priority: Normal · Location: Sample Village, Sample Mandal

This grievance was filed on **01/08/2026** and the current status is **Submitted** / సమక మింబడికి . The matter is yet to be resolved and requires your kind intervention.

I, therefore, most respectfully request your goodself to kindly look into this matter and direct the concerned authorities to take immediate action for the resolution of the above grievance. Your kind intervention in this regard will be highly appreciated.

Thanking you,

Yours faithfully,

Ramesh Naidu

Sample Village, Sample Mandal

ABOUT THIS SAMPLE: Every name, village, phone number, and case number on this sample is invented for illustration. No real citizen's data is shown here.

8.4 Sample output — what a Batch List for Minister actually looks like

This is the report a constituency office would hand to the District Collector — built here with a small set of made-up sample complaints so the real layout is visible: the letterhead, the executive summary table, and the category-by-category detail table with blank columns for the Collector's office to fill in by hand.

To,

The Honourable District Collector,

Subject: Consolidated Grievance List for Sample Constituency for necessary action

Respected Sir/Madam,

I am enclosing herewith the consolidated list of 6 grievances received from citizens of **Sample Constituency** through the MPower Digital Grievance Tracking System. Of these, 2 have been resolved and 4 are pending resolution. I request your kind attention and necessary action on the pending matters.

Oldest unresolved complaint: 16 days — Drainage & Sanitation, Sample Village (GR/2026/000042)

Executive Summary / సారాంశం

Category	Total	Resolved	Pending
Drainage & Sanitation	3	1	2
Drinking Water Problem	2	1	1
Ration Card Issues	1	0	1
TOTAL	6	2	4

Drainage & Sanitation (3 complaints)

Case No.	Complaint	Citizen Contact	Village/Mandal	Days Pending	Priority	Status	Assigned To	Remarks
GR/2026/000042	Drainage overflow near main road	Ramesh Naidu · 9876543210	Sample Village, Sample Mandal	16 days	Normal	Submitted		
GR/2026/000039	Blocked drain outside school	Lakshmi Devi · 9123456780	Sample Village 2, Sample Mandal	9 days	Urgent	Acknowledged		
GR/2026/000021	Drain repaired after complaint	Suresh Babu · 9988776655	Sample Village, Sample Mandal	4 days	Normal	Resolved		

I request your goodself to kindly direct the concerned departments for early redressal of pending grievances.

Thanking you,

ABOUT THIS SAMPLE: Every office name, citizen name, phone number, and complaint on this sample is invented for illustration. No real citizen's data is shown here.

IF THIS NEEDS TO CHANGE: A fourth kind of printed document, or a change to what appears on any of these three, is a request to whoever maintains the system.

9. Screen: App Feedback

Shows what citizens and staff have said about the CTS app itself — not about any specific complaint, but about how easy or hard the tool itself is to use. Only Grievance Admin, Developer, and Support can see this.

9.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

This screen is deliberately not on the main bottom menu — it is used less often than Queue or Reports, so keeping it one extra tap away avoids crowding the main menu.

9.2 What this screen looks like

Shown with two made-up sample entries:

The summary cards give the total number of responses and the average star rating at a glance. The star filter lets you look at only the 5-star comments, or only the 1-star ones, instead of scrolling through everything. Each entry shows whether the person was a citizen or staff, which screen they were on when they left it, the date, and what they wrote.

This screen is read-only — there is nothing to fill in here yourself.

IF THIS NEEDS TO CHANGE: Replying directly to feedback from this screen does not currently exist — that would be a request to whoever maintains the system.

10. Quick Reference

Screen	How to get there	Section
Sign in	Login page (given to your office)	2
Register a new office	CTS page → "I am an MLA/MP Office" → "Register here"	3
Approve an office	Bottom menu → Verify	4
Work a complaint	Bottom menu → Queue	6
See charts & totals	Bottom menu → Reports	7
Print a letter or report	Bottom menu → Print	8
See app feedback	Verify screen → "View App Feedback"	9

Appendix: Roles at a Glance

Role	What they can see and do
Grievance Admin	The whole state; can act on any complaint; approves new offices; sees App Feedback.
Representative	Their own constituency only; works complaints step by step from Acknowledge through to Resolved/Escalated/Declined.
Authority	Their own constituency; only handles complaints already escalated to them.
Developer / Support	Same as Grievance Admin, used by MPower’s own team.

This guide reflects the CTS module as of August 2026. Some things — such as signing in with just a phone number — are planned but do not exist yet; look for "IF THIS NEEDS TO CHANGE" boxes throughout for details.

APPENDIX C

Citizen Guide

How citizens file, track, and print their grievances

MPower

Constituency Grievance Tracking System (CTS)

Citizen Guide

Every screen explained in plain language — how you get there, what each part is for, and when to use it

Free for every citizen — no office visit needed
August 2026

Foreword

MPower CTS exists so that filing a complaint with your MLA or MP doesn't require knowing the right person, travelling to an office, or hoping a paper complaint doesn't quietly get lost. It should take a phone, a few minutes, and nothing else.

This guide was written by the person who actually built the system — not a documentation team working from a spec, one developer working directly against the real, running app. Every screen shown here was checked against the actual app rather than assumed, so it genuinely matches what you'll see on your own phone. Where something is a known limitation rather than a finished feature, this guide says so plainly.

If anything in these pages is unclear, or the app itself falls short of what's promised here, I want to hear about it directly — the "Feedback" link inside the app (Section 9) reaches me too.

Contents

1. About This Guide

This guide explains, one screen at a time, how a citizen uses MPower CTS to file a complaint (grievance) with their local MLA, MP, or MLC office, and how to track it afterwards. Every section follows the same simple pattern:

- A path of boxes showing exactly how you reach that screen
- A real drawing of the screen, redrawn in plain black and white
- A plain-language explanation of everything on it

Nothing here is guessed — every field name and button comes from checking the real system.

NOTE: Filing a complaint through MPower CTS is completely free. No prior account or office visit is needed — signing in with your own phone number creates your citizen account automatically.

2. Getting Started

2.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

NOTE: Your choice of "Citizen" is remembered on this device/browser — next time you visit, you go straight back to your sign-in screen without picking a state again.

3. Signing In (Phone OTP)

There is no separate password to remember — your phone number is verified with a one-time code (OTP) sent to it.

3.1 What this looks like

Shown here as the two real steps, one after the other:

Step 1: type your mobile number and press "Send code." Step 2: type the 6-digit code sent to that number and press "Verify." "Resend code" becomes available 30 seconds after each send. "Wrong number?" takes you back to Step 1 to re-enter your number.

Once verified, first-time citizens continue to the profile form (Section 4). Returning citizens go straight to Your Complaints (Section 5).

4. One-Time Profile Registration

The first time you sign in, you enter your details once — these are reused automatically on every complaint you file afterwards, so you never have to re-enter them.

4.1 What this screen looks like

Shown here filled in with made-up sample details:

SAMPLE — One-time profile form

MMPower CTS · Home

Complainant Details

One-time — used for every complaint you file.

What each field means

Field	Required?	Notes
Name	Yes	
Father's/Husband's Name	No	
Full Address	No	
Ward No.	No	

Field	Required?	Notes
Membership Number	No	
Constituency	Yes	Chosen from a dropdown
Mandal	Yes	Type your mandal name — matches an existing one, or can be added if genuinely not listed
Village	Yes	Same as Mandal — type to match or add

NOTE: When typing your Mandal or Village, make sure to select it from the suggestions that appear — typing a name and simply moving on without selecting it will not save your entry.

Pressing Continue shows a full review screen of everything you entered, with the constituency/mandal/village names shown in full. Use "← Edit" to go back and correct anything, or "Confirm & Continue" to save it. Nothing is saved until you press Confirm.

NOTE: These details go directly onto your official Representation Letter later (Section 8) — it's worth checking them carefully on the review screen.

5. Your Complaints — the Main Screen

This is what you see every time you sign in after your first registration.

5.1 What this screen looks like

Shown here with two made-up sample complaints:

Your name and a "Feedback" link (about the app itself, not a specific complaint) sit at the top. "New complaint" starts a fresh complaint (Section 6). Below it is the list of every complaint you have filed, each showing its case number, title, and current status. Tapping any of them opens its tracking view (Section 7).

6. Filing a New Complaint

Reached by pressing "New complaint" on Your Complaints.

6.1 What this screen looks like

Shown here filled in with a made-up sample complaint:

SAMPLE — New complaint form

MMPower CTS · Home

SUBJECT

Drainage overflow near main road

CATEGORY

Drainage System

SPECIFIC ISSUE(S)

☐ Blocked drain

☐ Overflow onto road

PRIORITY

Normal

Urgent

DETAILED DESCRIPTION

The drainage canal has been overflowing for two weeks...

SUGGESTED SOLUTION (OPTIONAL)

EVIDENCE — PHOTO OR VIDEO (OPTIONAL)

+ Add photo or video

Review & Submit Complaint

Field	Required?	Notes
Subject	Yes	A short title. A microphone button lets you speak this instead of typing.
Category	Yes	e.g. Drainage System, Ration Card Issues — shown with the local-language name alongside where available
Specific issue(s)	No	Checkboxes specific to the category chosen
Priority	Yes	Normal or Urgent — defaults to Normal
Detailed Description	Yes	Explain the problem fully. Microphone button available here too.
Suggested Solution	No	What you think would fix it, if you have a view

Field	Required?	Notes
Evidence — Photo or Video	No	More than one file can be attached

Pressing "Review & Submit Complaint" shows everything you entered for a final check. Use " ← Edit" to go back, or "Confirm & Submit Complaint" to file it. Nothing is submitted until you press Confirm.

NOTE: You can file up to 3 complaints per day. If you reach this limit, you'll be told how many you've already filed and asked to try again the next day.

7. Tracking a Complaint

Tapping a complaint from Your Complaints opens its tracking panel.

7.1 What this screen looks like

Shown here with made-up sample history:

Case number, title, and current status sit at the top, followed by a "Print Representation Letter" button (Section 8) and your full description. History is a timeline of every status change, who made it, when, and any note left with it. An Evidence section lets you view previously attached photos and add more at any time.

GOOD TO KNOW: Video is only accepted when you first file a complaint (Section 6). Adding evidence here afterward only accepts photos, one at a time, up to 5MB each — if you need to add a video after filing, that currently isn't possible.

This view is read-only for you — status changes are made by the constituency office as they work on your complaint; you will see each update appear here as it happens.

7.2 How your complaint's status actually moves

This is the real path a complaint travels, from the moment you file it to the moment it's resolved:

GOOD TO KNOW: Sometimes a complaint needs approval from higher up than your local office before it can be marked Resolved. When that happens, your status stays showing "In Progress" the whole time — it will not change to a different label while that review is happening. If your complaint seems to stay on "In Progress" longer than you expected, this is very likely why, and it does not mean it has been forgotten.

Every update that does change your status appears on your tracking screen (Section 7.1) the moment the office makes it — in the History list, with who made the change and when. There is no separate notification step and no delay.

NOTE: If your complaint is ever declined instead of resolved, the office is required to type a reason first — you will always see that reason in your History list, never just a bare "Declined" with no explanation.

8. Printing Your Representation Letter

Every complaint can be printed as a formal, bilingual (English/Telugu) letter addressed from you to your MLA/MP — useful if you want a physical copy or need to submit one in person.

8.1 How you get here

This path shows exactly how you arrive at this screen — each arrow is one real click or action, nothing skipped.

8.2 Sample output — what it actually looks like

Built here with made-up sample details so you can see the exact layout, wording, and bilingual formatting your MLA/MP office would actually receive:

SAMPLE — not a real complaint	
GRIEVANCE REPRESENTATION / పేర్ వాడు పేర్ వాసన పత్రం Government of Andhra Pradesh · Submitted through MPower CTS · Case No: GR/2026/000042	
To, The Honourable Member of Legislative Assembly, Sri/Smt. A. System Reference: Case No. GR/2026/000042 · Filed: 1/8/2026, 7:15:01 pm · Generated: 14/8/2026, 11:20:00 am · MPower Grievance Tracking System	

ABOUT THIS SAMPLE: Every name, village, phone number, and case number on this sample is invented for illustration. No real citizen's data is shown here.

Pressing "Print now" opens your browser's own print window — from there you can print physically, or choose "Save as PDF" to keep a digital copy instead.

9. Giving Feedback About the App

The "Feedback" link on Your Complaints is for feedback about MPower CTS itself — how easy it is to use, anything confusing, anything you'd like to see — not for updates on a specific complaint (use that complaint's own tracking panel for that).

10. Quick Reference

To...	Do this
File a new complaint	Your Complaints → "New complaint"
Check a complaint's status	Your Complaints → tap the complaint
Print a letter for a complaint	Open the complaint → "Print Representation Letter"
Add more photos to a complaint	Open the complaint → Evidence section
Give feedback about the app	Your Complaints → "Feedback"
Sign out	Top bar → Sign out

This guide reflects the CTS module as of August 2026.
